

IILM UNIVERSITY, GREATER NOIDA

INTERNSHIP REPORT PRESENTATION

Google Cloud Generative AI

AICTE – EduSkills Virtual Internship Program

Prince Kumar Khatri

Roll No. 2410030684 | B.Tech CSE | Batch 2024–2028

Internship Duration: April – June 2026

Candidate Profile

Name

Prince Kumar Khatri

Institute

IILM University, Greater Noida, U.P.

Roll Number

2410030684

Internship Domain

Google Cloud Generative AI

Programme

B.Tech – Computer Science & Engineering | Batch 2024–2028

Duration

8 Weeks | April – June 2026

EduSkills, AICTE & Google Cloud

- The supplied offer letter identifies an 8-week AICTE–EduSkills Virtual Internship Program.
- The internship domain is Google Cloud Generative AI.
- The program is conducted under the patronage of AICTE and the National Internship Portal.
- The offer letter states that the curriculum is provided by Google Cloud.
- Learning combines structured weekly modules, assessments, assignments where required, and a final assessment.

Why Generative AI Needs Structured Practice

- Generative AI combines rapidly evolving concepts such as large language models, multimodality and AI agents.
- Students need practical exposure to prompt engineering, model concepts, retrieval and deployment workflows.
- Responsible AI must be considered alongside technical development.
- A week-wise curriculum provides a structured path from fundamentals to advanced developer topics.

What the Internship Set Out to Teach

Generative AI

Understand generative AI and large language models.

Prompt Engineering

Develop prompts and explore multimodal techniques.

Responsible AI

Learn responsible and ethical AI principles.

Modern Models

Study attention, transformers and diffusion models.

RAG & Embeddings

Explore embeddings and multimodal RAG with Gemini.

MLOps & Agents

Understand Vertex AI MLOps and AI-agent workflows.

The Toolkit Behind the Internship

Google Cloud

Cloud platform referenced by the curriculum.

Vertex AI

Platform used in the curriculum for multimodal AI and MLOps concepts.

Gemini

Generative AI model family used for multimodal RAG topics.

Transformers

Attention and encoder–decoder architecture.

Embeddings & RAG

Representations and retrieval-augmented generation.

AI Agents

Generative AI applications that transform workflows.

From Prompt to AI Application

The 8-Week Learning Journey

1

Introduction to Generative AI

Gen AI, LLMs, use cases, prompt tuning

2

Introduction to Generative AI

Responsible AI and ethical principles

3

Introduction to Generative AI

Prompt engineering, image analysis, multimodal techniques

4

Generative AI for Developers

Diffusion, attention, encoder-decoder, transformers

5

Generative AI for Developers

Captioning, embeddings, multimodal RAG with Gemini

6

Generative AI for Developers

Responsible AI and MLOps using Vertex AI

7

Generative AI Leader

Generative AI beyond chatbots and business applications

8

Generative AI Leader

Generative AI apps and AI agents

Assessment & Completion Requirements

- Weekly assessments are used to track progress and understanding.
- Certain modules require project documentation and assignments.
- The final week includes a Final Assessment Test.
- The final grade is based on overall performance, including weekly assessments, project submissions and the final test.
- The offer letter states that a Virtual Internship Certificate is awarded upon successful completion of the required steps.

THANK YOU

Prince Kumar Khatri
